

Shofiyatur Rahmatin Nazilah

Web Developer | Cybersecurity & SOC Analyst Intern

Bekasi, Jawa Barat • +62 851-4228-4932 • shofiyaturrahmatinnazilah@gmail.com

[linkedin.com/in/shofiyatur-rahmatin-nazilah](https://www.linkedin.com/in/shofiyatur-rahmatin-nazilah) • github.com/zyra-27

PROFESSIONAL SUMMARY

Informatics undergraduate (GPA 3.61/4.00) with hands-on experience building full-stack web applications and a strong foundation in cybersecurity principles. Developed end-to-end web systems using PHP, MySQL, and JavaScript, and completed structured cybersecurity training through Google Skills Boost and Coursera achieving scores up to 100%. Built a NIST CSF-aligned Security Risk Management audit platform and contributed to collaborative team projects from development through public showcase. Eager to apply both web development and security skills in a real-world internship environment.

EDUCATION

S.Kom. (Informatics) - President University, Bekasi

Sep 2024 - Dec 2027 (expected)

- GPA: 3.61 / 4.00 | President University Jabeka Scholarship - Rank 3 Awardee
- Relevant coursework: Web Application Development, Database Systems, Network Security, Ethical Hacking, Digital Forensic, Security Risk Management & Audit
- Activities: President University Robotic and Technology Club • Setsail Founders Weekend (Feb 2025)

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript - responsive layouts, form handling, UI design

Backend: PHP (native), basic MVC structure, RESTful logic

Database: MySQL - schema design, CRUD operations, relational queries, SQL joins & filtering

Tools & Version Control: Git, GitHub, Apache/Nginx, VS Code

OS & Linux: File management, permissions, process management, basic system monitoring

Network & Security: TCP/IP, DNS, HTTP fundamentals, firewall & access control, OWASP awareness

Threat Analysis: Malware & phishing analysis (hands-on labs), IoC identification, log review, NIST CSF

Other: IoT web interface (ESP32), report generation, input validation, role-based access control

Language: Indonesian (native) • English (intermediate)

PROJECTS

Seullicious - Restaurant Order System - Personal Project

Jan 2026 - April 2026

github.com/zyra-27/Seullicious • PHP • MySQL • HTML/CSS • JavaScript

- Built a web-based restaurant ordering system enabling customers to order dine-in or takeaway, with an admin dashboard for order management and recap
- Designed and implemented the full database schema, customer-facing UI, and applied input validation with role-based access control (admin vs. user) for data integrity and security

SRM Audit Platform - NIST CSF - Team Project

Jan 2026 - Feb 2026

github.com/almira-al409/SRM-AUDIT • PHP • MySQL • Apache • NIST CSF

- Built a full-featured security audit web platform covering asset inventory, vulnerability mapping, risk matrix, compliance scoring, and automated PDF report generation
- Implemented role-based access control (Admin, Auditor, Auditee) and integrated an AI assistant for risk querying - reflecting real-world SOC and GRC operational workflows

PresLingo - Mandarin Language Learning Platform - Team Project (Perform Engine)

Jan 2025 - May 2025

HTML • CSS • JavaScript • Full-Stack Team

- Contributed to end-to-end development of a web-based Mandarin language learning platform as part of a collaborative full-stack team
- Took primary responsibility for testing, quality assurance, and system stability checks; platform was successfully showcased at a public exhibition

Smart Waste Management System - Multidisciplinary Team Project

Jun 2025 - Jul 2025

IoT • ESP32 • Web Interface • Servo Motors

- Served as Secretary in a team building an IoT-based robot controlled via a web interface using ESP32, ultrasonic sensors, and servo motors

- Handled project documentation (proposal, guidebook, final report); showcased at President University & SMKN 1 Cikarang Selatan with a 9.06/10 satisfaction score

TRAINING & CERTIFICATIONS

Cybersecurity Hands-on Labs & Training - Coursera Nov 2025 - Present

- Completed structured labs on cybersecurity fundamentals, network & system security, malware & phishing analysis, and Linux command-line operations; scores up to 100%

Fullstack Intensive Bootcamp - MySkill June 2025 – July 2025

- Completed intensive training covering frontend, backend, and database integration for full-stack web development

Certifications:

- Automate Cybersecurity Tasks with Python - Score: 98.81% (Coursera, Jun 2026)
- Tools of the Trade: Linux and SQL - Score: 100% (Coursera, May 2026)
- Play It Safe: Manage Security Risks - Score: 87.53% (Coursera, Nov 2025)
- Connect and Protect: Networks and Network Security - Score: 100% (Coursera, Nov 2025)
- Foundations of Cybersecurity (Coursera, Sep 2025)
- Intermediate Cybersecurity - Fresh Graduate Academy Digital Talent Scholarship (Digitalent, Aug-Oct 2025)
- Fundamental Cybersecurity - Fresh Graduate Academy Digital Talent Scholarship (Digitalent, Aug 2025)

ACADEMIC LAB PROJECT

Network Security Lab - Mini Lab, Network Security Course, President University Nov 2025 – Dec 2025

Group Project • Tools: Nmap, Iptables, Hping3, Tcpdump, Iptraf-ng, Nload, Cisco Packet Tracer

Team: Almira Shinta Aulia, Melinia Fransiska Telaumbanua, Naura Rizky, Shofiyatur Rahmatin Nazilah

Key Implementations:

- Network Reconnaissance: Host discovery on 192.168.43.0/24 via Nmap ARP scan (-PR); detected open ports 21 (FTP), 22 (SSH), 80 (HTTP) using -sV, -sS, -A, -Pn flags
- Attack Simulation: ICMP flood with Hping3 (1000-byte, --flood) - observed traffic spike from ~0 to 1.49 MBit/s on Nload; Smurf attack via broadcast address; captured with Tcpdump and Iptraf-ng
- Firewall (Iptables): INPUT/OUTPUT/FORWARD rules by source IP, MAC, protocol; SSH connection cap (--connlimit-above 3); MAC whitelist (14:AC:60:C9:D9:75) for SSH-only access; selective HTTP vs FTP access per host
- NAT: DNAT port forwarding (port 80 and 10000 to internal Windows server); SNAT/MASQUERADE to mask client IP - external browser saw firewall IP 10.188.199.185 instead of real source
- Hospital Network Design (Cisco Packet Tracer): 3 user subnets (Finance/Medical, Nursing/Lab/Paramedical, Guest), server DMZ, VLANs with sub-interfaces, router ACLs, and NAT; asset priority - High: Finance DB, Medical DB; Medium: Lab, Nursing; Low: Web, Email, Guest Portal

Security Principles Applied:

- Least Privilege per host; Defense in Depth (firewall + MAC filtering + connection limits); Network Segmentation for high-value assets; rule-order discipline (DROP before ACCEPT in iptables); all 14 lab objectives verified with Nmap and traffic analysis tools

WORK EXPERIENCE

Staff, Call Center - Part-Time Telemarketing, President University

Nov 2025 - Feb 2026

Cikarang Utara

- Managed and validated prospective student data collected from high school marketing sessions across multiple schools
- Conducted structured follow-up calls to confirm enrollment status and registration details, demonstrating data accuracy discipline and professional communication
